

EXAM RESULTS' STATISTICAL ANALYSIS

UG 2017 ADMISSION

Introduction

Examinations are meant to measure the students understanding of the subject. Lot of factors influence a student's performance in examinations. A statistical analysis on the examination results was conducted to gain insights on the performance of students. This attempt by Internal Quality assurance Cell of the College is to identify the courses which requires additional coaching.

There are two parts for this report

- a) *Performance analysis of individual student*: Semester results and final CGPA are graded against the plus two marks. The relative progress indicates students' performance in the UG course comparison with his performance in plus two
- b) *Comprehensive result analysis*: Detailed analysis of exam results which gives the performance of the class in each subject. This report will enable the Head of the Department/Programme Coordinator to make additional efforts to upgrade the results. Some courses are statistically selected. Suggestions are given to improve the exam results.

Glossary

Average (Mean)

The **Arithmetic Mean** is the average of the numbers: a calculated "central" value of a set of numbers.

To calculate it:

- add up all the numbers,
- then divide by how many numbers there are.

Median

The median is the middle number in a sorted, ascending or descending, list of numbers and can be more descriptive of that data set than the average.

The median is sometimes used as opposed to the mean when there are outliers in the sequence that might skew the average of the values.

Skewness

Skewness refers to distortion or asymmetry in a symmetrical bell curve, or normal distribution, in a set of data. If the curve is shifted to the left or to the right, it is said to be skewed.

Skewness can be quantified as a representation of the extent to which a given distribution varies from a normal distribution.

Positive skewness

Mean (average) marks greater than median- more number of students are having less marks

Positive skew values are not good

Negative skewness

Mean (average) marks less than median- more number of students are having high marks

Negative skew values are good

Our targets

- Average marks greater than 70 with a negative skew
- Maximum marks above 85
- Standard deviation less than 18
- Pass percentage- above 80

Selection criteria

Papers were identified and selected to x, y, z categories based on the following table.

Selection criteria of courses					
Category	Fail %	skewness	Avg marks (%)	Std dev	Max marks (%)
z	>10	> + 0.5	<55	>18	<80
y	>10	> + 0.5	<55	>18	
x	>10	> + 0.5			

Suggested Remedial Measures

Category	Actions
z	syllabus modifications
	additional crash course towards the beginning of exam
	make compulsory - answering of previous question papers
	special coaching to weak learners
y	make compulsory - answering of previous question papers
	special coaching to weak learners
x	special coaching to weak learners

Further suggestions and findings

- A relative grading may be implemented before finalising the internal marks.
- Students who fail in the initial semesters are tend to lose their confidence. Hence more attention and care are required in the first two semesters.
- A pre admission counselling session will be beneficial for the students to select their degree programmes. Many students come to realisation about the complimentary subjects only after the beginning of classes.

20. BSc Catering Science & Hotel Management
