**EXAM RESULTS' STATISTICAL ANALYSIS
UG 2019 ADMISSIONS
SEMESTER 1, 2 & 3**

INTRODUCTION

Examinations are meant to measure the students understanding of the subject. Lot of factors influence a student's performance in examinations. A statistical analysis on the examination results was conducted to gain insights on the performance of students.

The detailed analysis conducted for the 2017 admissions were very insightful. This is an extension of the work for 2019 admitted students.

IQAC/ Data Analysis

Comprehensive Result Analysis:

Detailed analysis of exam results which gives the performance of the class in each subject. This report will enable the Head of the Department/Programme Coordinator to make additional efforts to upgrade the results. Some courses are statistically selected. Suggestions are given to improve the exam results.

z-SCORE Analysis:

The z-score of each student was calculated in all examinations to review the progress of student in each subject. This enables the mentor to identify the weakness of mentee and suggest corrective actions. HODs / Programme Coordinators can arrange remedial classes based on the z score. Class teachers can arrange Detailed analysis of exam results which gives the performance of the class in each subject.

Glossary

Average (Mean)

The Arithmetic Mean is the average of the numbers: a calculated "central" value of a set of numbers.

To calculate it:

- add up all the numbers,
- then divide by how many numbers there are.

Median

The median is the middle number in a sorted, ascending or descending, list of numbers and can be more descriptive of that data set than the average.

The median is sometimes used as opposed to the mean when there are outliers in the sequence that might skew the average of the values.

Skewness

Skewness refers to distortion or asymmetry in a symmetrical bell curve, or normal distribution, in a set of data. If the curve is shifted to the left or to the right, it is said to be skewed.

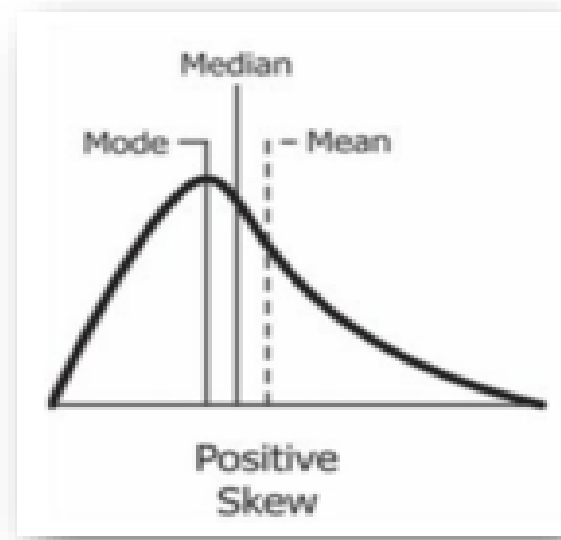

Skewness can be quantified as a representation of the extent to which a given distribution varies from a normal distribution.

Positive Skewness

Mean (average) marks greater than median- more number of students are having less marks

Positive skew values are not good

Negative Skewness

Mean (average) marks less than median- more number of students are having high marks

Negative skew values are good

Our Targets

- Average marks greater than 70 with a negative skew
- Maximum marks above 85
- Standard deviation less than 18
- Pass percentage- above 80

Selection Criteria

Papers were identified and selected to x, y, z categories based on the following table.

Selection criteria of courses					
Category	Fail %	skewness	Avg marks (%)	Std dev	Max marks (%)
z	>10	> + 0.5	<55	>18	<80
y	>10	> + 0.5	<55	>18	
x	>10	> + 0.5			

Suggested Remedial Measures

Category	Actions
z	syllabus modifications
	additional crash course towards the beginning of exam
	make compulsory - answering of previous question papers
	special coaching to weak learners
y	make compulsory - answering of previous question papers
	special coaching to weak learners
x	special coaching to weak learners

Z-Score

The value of the z-score tells you how many standard deviations you are away from the mean. If a z-score is equal to 0, it is on the mean. A positive z-score indicates the raw score is higher than the mean average. For example, if a z-score is equal to +1, it is 1 standard deviation above the mean.

In the present report the calculated z score are multiplied by 10 for aesthetic purpose.

$$Z = \frac{x - \mu}{\sigma}$$

The diagram shows the Z-score formula with red arrows pointing from labels to the corresponding parts of the formula: 'Score' points to 'x', 'Mean' points to 'μ', and 'SD' points to 'σ'.

Students who show positive and negative z scores are highlighted for easy identification.
