Time: Three Hours

Maximum: 75 Marks

Answer any *three* questions from **Part A** and *one* question from a **Part B**.  
Question from **Part C** is **compulsory**.

**PART A**

Answer any *three* of the following.

1. (a) Read the following passage and answer the questions in a sentence each:

Do birds know how to come back home after a long flight? Bird scientists, known as ornithologists, say that birds know exactly where they are and where their nests are. Even the young ones can fly hundreds of nautical miles without losing their way. How do they do it? God has given them a tremendous sense of direction; possibly they have a compass of sorts in their brain. Every year, we can see birds from North India fly to the south. In India we have several bird sanctuaries where birds from both parts of the globe come, spend a few months and return when the climatic conditions in their home land are more favourable. When it is winter in the northern hemisphere, it is summer in the southern hemisphere. The birds which cannot stand the cold climate fly to the warmer regions. They are called migratory birds. They can fly non-stop up to twenty hours or so in one stretch and cover a few hundred miles in one stop. The migratory birds always fly in groups.

(i) Who is an ornithologist?

(ii) Why do we call some birds migratory?

(iii) Are the seasons same in both hemispheres.

(iv) Do the migratory birds fly single or in groups?

(v) How long can migratory birds fly?

**(5 × 2 = 10 Marks)**

- (b) Write a précis of the above passage in above one – third of its length.

**(1 × 5 = 5 Marks)**

- (v) It is napoleon who said the word impossible is not in my dictionary.

(5 × 1 = 5 Marks)

(c) Make notes of the following passage:

Chocolate diamonds that are actually brown diamonds are compared to the well-known white diamond, which aren't of much worth. Diamonds are produced in mines. The best known diamond mines are in Australia, South Africa and Russia. The largest diamond mine was discovered in 1976 in the desert of Australia near a little creek named Lake Argyle. Diamonds are created under very extreme conditions of pressure and high temperature. It is a general misunderstanding that there exist only white colourless diamonds. Actually, diamonds exist in many different colours. The value of a diamond is based on its shape, brightness and colour. Before the development of the Argyle Diamond mine in Australia in 1986, most brown diamonds were considered worthless for jewelry; they were not even assessed on the diamond colour scale, and were predominantly used for industrial purposes.

(1 × 5 = 5 Marks)

4. (a) Write a story from the following outline

A lion ..... His sleep disturbed by a little mouse ..... Lion furious ..... catches the mouse ..... begs for mercy ..... I may be useful to you ..... lion laughs ..... sets him free ..... lion caught in a net ..... the mouse comes to his help.
