# THE INFLUENCE OF INTERNET ENTERTAINMENT USE UPON THE ATTITUDE TOWARDS HOMOSEXUALITY AMONG STEM AND LIBERAL ARTS STUDENTS

## Abstract

India is a country of immense diversity, and its residents' capacity to live with that diversity is its most celebrated feature. Even then, sex and sexuality were forbidden topics among ordinary men and academic studies for a long time, and the situation has only somewhat improved in recent years. The current era needs a greater number of studies in this sector, since the number of persons willing to accept their sexual orientation and live their lives as they are is rapidly increasing, signalling a critical shift in society. The purpose of this study was to better understand the influence of courses learned, gender, and religion on the attitudes of college going young adults about homosexuality, with a special emphasis on the effect of Internet Entertainment Use in their attitudes toward homosexuality. A total of 234 students were included in the study, with a roughly equal percentage of STEM and Arts students. The Homosexuality Attitude Scale, established by Mary E. Kite and Kay Deaux (1986), and the Problematic Internet Entertainment Use Scale, developed by Lopez-Fernandez et al. (2013), were utilised in the study. The quantitative study, which included the use of relevant questionnaires, was coded and statistically analysed using correlations, t-tests, and analysis of variance to come to the conclusion that there is no significant relationship between homosexuality attitudes and Internet entertainment use among young adults doing any academic course. It was also revealed that, as compared to male young people, females had a more positive attitude toward homosexuality, with religion playing no influence. According to the findings of the study, arts students had a more favourable attitude toward homosexuality than STEM students. There is immense scope for further research works in this area which has also been mentioned in the report.

# **AGGRESSION AND LIFE SATISFACTION AMONG COUPLES**

## **CHAPTER-1 INTRODUCTION**

This study assessed the mutual understanding within couples through forms of communication which help facilitate the stability of the relationship.

A stable and satisfying marriage can provide an important source of emotional and instrumental support throughout adulthood, and is associated with increased economic well-being, mental health, and physical health. Some of these apparent benefits of marriage may result from improved health behaviors among married people, care and monitoring provided by a spouse, or by selection of the healthiest, happiest, and most economically secure men and women into stable marriages in the first place. Although the exact nature of processes producing these positive outcomes is not well understood, marriage is associated with important benefits for older Americans.

Marital quality is among the most heavily studied aspects of marital relationships, which is not surprising given its strong association with the stability of marital unions. Measures of marital quality are most often based on reports of the level of happiness or satisfaction with one's marriage. Social scientists once generally believed that marital quality followed a U-shaped pattern over the life course, declining in the early years of marriage and then rising again at midlife. This pattern was thought to result from a reduction in the compatibility of spouses over time or from changes in the marital relationship associated with the shifting demands of child rearing and other social roles over the life course. The evidence for such a pattern, however, was based largely on cross-sectional samples, which infer rather than demonstrate change over the course of individual marriages. Analyses of longitudinal data conducted in the 1990s support the notion that marital quality declines early in marriage, but do not suggest that marital quality recovers again in midlife (Glenn; Vaillant and Vaillant). Instead, these studies suggest that marital quality remains relatively stable during the later years of marriage.
