Abstract

Klimakodesmus Carl, 1932 is briefly redescribed, rediagnosed, and shown to be an oligotypic genus endemic to southern India and distinct from the particularly similar genus *Pyrgodesmus* Pocock, 1892, monobasic and endemic to Sri Lanka, by several important features of peripheral and, especially, gonopodal structure. A new species, *Klimakodesmus bilobocaudatus* sp. nov., is described from Kerala state, India, differing from the sole accepted, and type species *K. gravelyi* Carl, 1932, from Tamil Nadu state, primarily by the laterally trilobate paraterga, the caudally more deeply bilobate mid-dorsal keel on ring 19, and certain minor details of the gonopodal structure.

Key words: *Klimakodesmus*, *Pyrgodesmus*, taxonomy, new species, India, Sri Lanka

Introduction

At present, the millipede fauna of India, however insufficiently studied, comprises 270+ nominate species or subspecies in at least 90 genera, 25 families and 11 orders (Golovatch & Wesener 2016). Of them, the large and mostly tropical family Pyrgodesmidae contains some 14 species in seven genera, including *Klimakodesmus* Carl, 1932.

The taxonomy of Pyrgodesmidae is long known to be particularly badly confused and chaotic globally, with more than 170 genera, largely monotypic, and nearly 400 species all over the tropics, marginally in Southern Europe, North Africa, southern U.S.A., Japan, Taiwan and central China (Enghoff *et al.* 2015). Progress is strongly hampered by the small size of the animals (typically 3–16 mm long), as well as the outstandingly diverse and often complex structures, both peripheral and gonopodal, which are often difficult to see, let alone describe and depict. Numerous pyrgodesmid genera remain monotypic, often based only on female or even juvenile material, and delimited using solely such somatic features as the number of body segments/rings, the shape, distribution and location of ozopores and tergal ornamentations, the structure of the paraterga etc.

Klimakodesmus was originally described based on a single, and type species, *K. gravelyi* Carl, 1932, originating from near Coonoor and Mudumalai, both in Tamil Nadu state, Western Ghats, southern India (Carl 1932). Verhoeff (1939) promoted *Klimakodesmus* to the rank of a monobasic subfamily, Klimakodesminae Verhoeff, 1939, but presently it is considered as a strict junior subjective synonym of Pyrgodesmidae (Hoffman 1980; https://www.fieldmuseum.org/sites/default/files/taxon_table_5.pdf).

Carl (1932), when erecting his *Klimakodesmus*, compared it to *Pyrgodesmus* Pocock, 1892, the type genus of Pyrgodesmidae and also monobasic (Pocock 1892), because both genera shared numerous somatic features. He paid special attention to the identity of *Pyrgodesmus obscurus* Pocock, 1892, the type species of *Pyrgodesmus*, described from two male syntypes from Pundaluoya, Sri Lanka. Carl (1932) compared the original, rather superficial description and few schematic drawings of *P. obscurus* as given by Pocock (1892) to the excellent and richly illustrated

Abstract. The jumping spider *Menemerus marginatus* (Kroneberg, 1875) is reported for the first time from India, from the Desert National Park in Rajasthan. The male and female *M. marginatus* are redescribed from Indian specimens and the known distribution of this species, in southwestern Asia, is mapped.

Keywords. Desert National Park, distribution, jumping spider, Rajasthan

The genus *Menemerus* (Simon, 1868) is most diverse on the African, Asian, and European continents (Mariante & Hill, 2020). Presently this genus includes 65 species worldwide. Of these, *M. albocinctus* (Keyserling, 1890), *M. brachygnathus* (Thorell, 1887), *M. brevibulbis* (Thorell, 1887), *M. fulvus* (L. Koch, 1878) and *M. nigli* (Wesołowska & Freudenschuss, 2012) are known from India (Keyserling, 1890; Jastrzębski, 1997; Roy et al., 2016; Chatterjee et al., 2017; World Spider Catalog, 2021). During a recent *Arachnological Diversity Assessment* of the Desert National Park Wildlife Sanctuary of Rajasthan, India, three *Menemerus* spiders were collected. Later, we identified these as *M. marginatus* (Kroneberg, 1875) through the use of taxonomic keys provided by Wesołowska et al. (2011) and Bauer et al. (2015).

The known distribution of *Menemerus marginatus* includes parts of Afghanistan, Azerbaijan, Central Asia (southwestern European part of the former USSR, to include Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan), Iran, Pakistan, and the United Arab Emirates (Figure 1; World Spider Catalog, 2021). This new record (Figure 1: locality 32) extends the known distribution of this species in southwestern Asia to the southeast, into India. As previously suggested (Pook et al., 2009; Linder et al. 2017), climatic conditions in the Thar Desert that divides India and Pakistan are similar to those in contiguous, arid areas of southwestern Asia, and this area can be expected to harbor species previously found only to the north and west.

Seawater Intrusion in Coastal Areas from Poovar to Shangumugham, Thiruvananthapuram District, Kerala, India

Abstract

The coastal aquifers in Kerala are experiencing seawater intrusion due to overexploitation in order to meet the demand of the growing population. Only a few studies have been done in the present study area. So, a study was conducted on coastal aquifers from Poovar to Shangumugham, Thiruvananthapuram district, Kerala state in order to find out the status of seawater intrusion in the area. Groundwater samples were collected and the quality and impact of saltwater intrusion were studied by determining the geochemical characters of 78 groundwater samples collected during pre-monsoon and post-monsoon each. Physical parameters and chemical parameter major cations and anions were determined. The data were analyzed and the multivariate analysis was carried out using SPSS 24. The correlation and R-mode factor analysis confirms the presence of seawater intrusion and using Q-mode factor analysis the areas affected by seawater intrusion were demarcated. Thus, the groundwater of the study area has to be managed sustainably considering the geochemical nature and their seasonal variations, as region proposed for study is a coastal fragile environment.

Keywords : Salt Water Intrusion, Coastal Aquifers, Poovar-Shangumugham, Groundwater, Kerala

Introduction

According to Centre for Coastal Zone Management and Coastal Shelterbelt data an appreciable amount of population lives on the coastal zones of India, which fluctuates depending on the season as most coastal areas are tourism hotspots and they depend primarily on groundwater for their needs since in these areas water is available with considerable ease. The overexploitation of groundwater in the coastal aquifers in order to meet the requirement of the growing population led to the introduction of saltwater to the fresh groundwater which is not a good scenario. The increasing trend towards the coastal tourism and improper management of the resource add the misery. Many studies indicated that the coastal groundwater system of Kerala experiences setbacks in terms of quality and quantity (Dipanjali, 2000; CGWB, 2002; Kunhambu, 2003; Laluraj *et al.*, 2005; CGWBKR 2007; Manjusree *et al.*, 2009; Prasanth *et al.*, 2012; Boominathan *et al.*, 2012; Sarath *et al.*, 2012; Priju *et al.*, 2012; Priju *et al.*, 2014; Anil-Kumar *et al.*, 2015; Midhun *et al.*, 2017; Sreekesh *et al.*, 2018; Pramada *et al.*, 2018). So, it is so important to assess the vulnerability of the aquifer to seawater ingress and only a few studies have

been done in the present study area. So, the main purpose of the study is to understand the present hydrogeological situation along the coastal stretches extending from Poovar to Shangumugham in Trivandrum district of Kerala state and grade the area based on vulnerability of aquifers towards intrusion of seawater for which multivariate statistical analyses act as a reliable method (Akbal *et al.*, 2011).

Study Area

The study area is located in the coastal regions of Thiruvananthapuram district, Kerala state. The study area extends from coastal aquifers of Poovar to Shangumugham. The district is one of the rapidly developing areas in Kerala and also hosts its capital. The study area extends to 100sq.km and is located in the western coast of India which experiences a humid tropical climate. The annual variation of mean air temperature is from 21°C to 34°C with average annual rainfall is about 2035mm. The area lies in the low land or coastal plain and dominated by Sandstone and Silt together with Sand and silt with patches of Laterite, Charnockite and Khondalite group of rocks. The laterites are secondary

Human–wildlife interactions and people’s attitudes towards conservation: a case study from Central Kerala, India

S. K. Govind, E. A. Jayson

Govind, S. K., Jayson, E. A., 2021. Human–wildlife interactions and people’s attitudes towards conservation: a case study from Central Kerala, India. *Animal Biodiversity and Conservation*, 44.2: 139–151, Doi: <https://doi.org/10.32800/abc.2021.44.0139>

Abstract

Human–wildlife interactions and people’s attitudes towards conservation: a case study from Central Kerala, India. This paper studies the human–wildlife interaction in Central Kerala, India, and attempts to understand local people’s attitude toward wildlife and conservation. Data were collected from April 2009 to March 2014. A structured questionnaire survey was carried out among people living in the fringe areas of the forest (n = 210). Self–reported household crop loss was modelled as a function of agricultural, demographic and environmental factors. Wild pig (*Sus scrofa*) (57.1%) was the main crop foraging species, followed by Asian elephant (*Elephas maximus*) (12.9%). It was reported that 36% of farmers’ annual income was lost due to crop foraging by wild animals. Leopard (*Panthera pardus*) (69.76%), Indian rock python (*Python molurus*) (13.95%), dhole (*Cuon alpinus*) (9.3%) and stray dogs (6.97%) were responsible for the attacks on livestock. The factors that influenced crop loss according to the farmers were the extent of agriculture land that they owned (coefficient = 0.968), the distance to reserve forest from crop fields (–0.009), and age of respondents (0.78). Due to people’s awareness concerning the importance of wildlife, reports on human–wildlife interaction in the newspapers and strict enforcement of wildlife laws, people’s attitude towards conservation of wildlife was good, and they were not taking any negative precautions against wild animals.

Key words: Human–wildlife interaction, Wildlife conservation, Wildlife management

Resumen

La interacción entre los humanos y la fauna silvestre y la actitud de las personas en relación con la conservación de la fauna silvestre: un estudio de casos en Kerala central, en la India. El presente artículo estudia la interacción entre los humanos y la fauna silvestre en Kerala central, en la India, y trata de entender la actitud de las personas en relación con la conservación de la fauna silvestre. Los datos se recopilaron entre abril de 2009 y marzo de 2014. Se llevó a cabo una encuesta estructurada entre la población que habita en los márgenes de las zonas forestales (n = 210). Se elaboró un modelo de la pérdida de cultivos comunicada por los hogares como una función de factores agrícolas, demográficos y ambientales. El cerdo (*Sus scrofa*) era la principal especie que se alimentaba de los cultivos (57,1%), seguida del elefante asiático (*Elephas maximus*) (12,9%). Se comunicó que el 36% de los ingresos anuales de los agricultores se perdió a causa de los animales silvestres. El leopardo (*Panthera pardus*) (69,76%), el pitón de la India (*Python molurus*) (13,95%), el perro salvaje asiático (*Cuon alpinus*) (9,3%) y los perros callejeros (6,97%) atacaron al ganado. La superficie de tierra agrícola propiedad de agricultores que habitan en los márgenes (el coeficiente es de 0,968), la distancia de la parcela de cultivo a la reserva forestal (–0,009) y la edad de los encuestados (0,78) fueron los factores significativos que influyeron en la pérdida de cultivos comunicada por los agricultores que habitan en los márgenes del bosque. Debido a la concienciación de la población acerca de la importancia de la fauna silvestre, los artículos de prensa sobre la interacción entre los humanos y la fauna silvestre y el cumplimiento estricto de la legislación en materia de vida silvestre, la actitud respecto de la conservación de la fauna silvestre era buena y no se estaban tomando precauciones negativas contra los animales silvestres.

Palabras clave: Interacción entre humanos y fauna silvestre, Conservación de la fauna silvestre, Gestión de la fauna silvestre

Received 23rd November 2020; revised and accepted 23rd January 2021

Abstract. A gynandromorphic individual of *Trithemis aurora* is reported from a garden in Palakkad district, Kerala state, India. Its eyes, thorax, legs, wings, and abdomen show mosaic gynandromorphy. The abdomen is mostly gynochromic with the tip bearing female appendages. Detailed study of the specimen shows that female characters predominate but significant areas exhibit male characters.

Further key words. Dragonfly, Anisoptera, mosaic gynander, androchromism

Introduction

Gynandromorphs are genetically chimeric individuals consisting of adjacent male and female tissues, thus differing from intersexes which are genetically uniform (NARITA et al. 2010). Gynandromorphism is a rare phenomenon in nature and is readily detected in species that show sexual dimorphism. In arthropods, gynandromorphs have been recorded in crustaceans (FARMER 2004), arachnids (e.g., PALMGREN 1979; COKENDOLPHER & SISSON 1988; LABRUNA et al. 2002) and insects (e.g., MORGAN & BRIDGES 1919; NIELSEN 2010; GJERSHAUG et al. 2016). In dragonflies, gynandromorphism has been reported in at least 55 cases (cf. review by MARTENS & WILDERMUTH 2021). This phenomenon is conspicuous in species that exhibit marked sexual colour dimorphism such as *Crocothemis servilia* (Drury, 1770) (YOKOTA & ASAHINA 1953; FUTAHASHI 2017; RENJITH & CHANDRAN 2020), *Brachythemis contaminata* (Fabricius, 1793) (JOSHI et al. 2020) or *Neurothemis tullia* (Drury, 1770) (SHOME et al. 2019). Here we report on a case of phenotypical mo-

Electrochemical lithium and sodium insertion studies in 3D metal oxy-phosphate framework $\text{MoWO}_3(\text{PO}_4)_2$ for battery applications

Abstract

A new type of three-dimensional (3D) oxy-phosphate materials are explored for the application of Li and Na batteries. The molybdenum tungsten oxy phosphate, $\text{MoWO}_3(\text{PO}_4)_2$, was synthesized by solid-state method and evaluated for Li/Na insertion/de-insertion electrode material for the first time. The cell at charged state (vs. Li^+/Li) showed a discharge capacity of 786 mAh g^{-1} within the voltage window of 0.3 V with amorphization of crystalline $\text{MoWO}_3(\text{PO}_4)_2$ as observed from ex-situ powder XRD analysis. The structural integrity was revealed in this material, even with nearly more than 5 Li^+ ions into the lattice, leading to the discharge capacity of 250 mAh g^{-1} . The reversible charge/discharge behavior with insertion/de-insertion of 2.4 Li^+ ions in the voltage range of 1.65–3.5 V resulted in 110 and 95 mAh g^{-1} at C/10 and C/5 rates, respectively. On the other hand, poor cycling performance was noticed for Na ion insertion and desertion, with a discharge capacity of 250 mAh/g within the voltage range of 0.3–3.5 V (vs. Na^+/Na).

Keywords $\text{MoWO}_3(\text{PO}_4)_2$ · X-ray diffraction · Li and Na insertion · Electrochemical properties

Introduction

Lithium insertion and de-insertion in tungsten and molybdenum-based oxides have been extensively studied for Li and Na-ion batteries. The reported phases of molybdenum/tungsten oxides and alkali molybdenum/tungsten oxides include MoO_3 , WO_3 , A_xMoO_3 ($\text{A} = \text{Li}, \text{Na}$), Li_2MoO_3 , and $\text{Li}_3\text{Mo}_5\text{O}_{12}$ [1–4]. These oxides showed Li-ion insertion and de-insertion of 2 to 3 Li ions into and from the structure, respectively, in the voltage range of 0.5–4.3 V [4–6]. Recently, the triclinic $\text{Li}_4\text{Mo}_5\text{O}_{17}$ phase (space group, $P-1$)

reported by Pop et al. has edge shared MoO_6 polyhedra, resulting in a ribbon type structure. The insertion of 7 Li-ions into the triclinic $\text{Li}_4\text{Mo}_5\text{O}_{17}$ phase result in a rock salt type $\text{Li}_{11}\text{Mo}_5\text{O}_{12}$ phase. De-insertion of 7 Li-ions shows the formation of the parent phase, cycled at a C/100 rate in the voltage window of 2.2–3.0 V [7]. The garnet framework compound, $\text{Li}_3\text{Nd}_2\text{W}_2\text{O}_{12}$, has been explored for Li-ion batteries and shows the possibility of reversible insertion and de-insertion of Li ions.

New polyanionic materials, especially phosphate-based compounds, are considered structurally and thermally resistant during charge/discharge cycling with fast diffusion of Li and Na ions [8, 9]. For instance, LiFePO_4 with olivine structures is the best example of the cathode material of choice for Li-ion battery applications in plug-in hybrid electric vehicles. This is because of its structural integrity and thermal and interface stability during fast diffusion of Li ions at high rate capability [9–11]. NASICON-type materials like $\text{A}_3\text{Fe}_2(\text{PO}_4)_3$ ($\text{A} = \text{Li}$ or Na), $\text{V}_2(\text{SO}_4)_3$ [12, 13], and the oxy polyanionic framework compounds such as Li_xMOXO_4 ($\text{M} = \text{V}$ and Ti ; $\text{X} = \text{S}, \text{P}$ and Si) and both α and β forms of $\text{NbO}(\text{PO}_4)$ have been widely explored as cathode materials recently for Li and Na-ion batteries [14–17]. Due to the availability of easily accessible sites for the intercalated ions to occupy and the presence of metal atoms that

A new type of three-dimensional (3D) oxy-phosphate materials are explored for the application of Li and Na batteries. The molybdenum tungsten oxy phosphate, $\text{MoWO}_3(\text{PO}_4)_2$, was synthesized by solid-state method and evaluated for Li/Na insertion/de-insertion electrode material for the first time. The cell at charged state (vs. Li^+/Li) showed a discharge capacity of 786 mAh g^{-1} within the voltage window of 0.3 V with amorphization of crystalline $\text{MoWO}_3(\text{PO}_4)_2$ as observed from ex-situ powder XRD analysis. The structural integrity was revealed in this material, even with nearly more than 5 Li^+ ions into the lattice, leading to the discharge capacity of 250 mAh g^{-1} . The reversible charge/discharge behavior with insertion/de-insertion of 2.4 Li^+ ions in the voltage range of 1.65–3.5 V resulted in 110 and 95 mAh g^{-1} at C/10 and C/5 rates, respectively. On the other hand, poor cycling performance was noticed for Na ion insertion and desertion, with a discharge capacity of 250 mAh/g within the voltage range of 0.3–3.5 V (vs. Na^+/Na).

Keywords $\text{MoWO}_3(\text{PO}_4)_2$ · X-ray diffraction · Li and Na insertion · Electrochemical properties

Introduction

Lithium insertion and de-insertion in tungsten and molybdenum-based oxides have been extensively studied for Li and Na-ion batteries. The reported phases of molybdenum/tungsten oxides and alkali molybdenum/tungsten oxides include MoO_3 , WO_3 , A_xMoO_3 ($\text{A} = \text{Li}, \text{Na}$), Li_2MoO_3 , and $\text{Li}_3\text{Mo}_5\text{O}_{12}$ [1–4]. These oxides showed Li-ion insertion and de-insertion of 2 to 3 Li ions into and from the structure, respectively, in the voltage range of 0.5–4.3 V [4–6]. Recently, the triclinic $\text{Li}_4\text{Mo}_5\text{O}_{17}$ phase (space group, $P-1$)

reported by Pop et al. has edge shared MoO_6 polyhedra, resulting in a ribbon type structure. The insertion of 7 Li-ions into the triclinic $\text{Li}_4\text{Mo}_5\text{O}_{17}$ phase result in a rock salt type $\text{Li}_{11}\text{Mo}_5\text{O}_{12}$ phase. De-insertion of 7 Li-ions shows the formation of the parent phase, cycled at a C/100 rate in the voltage window of 2.2–3.0 V [7]. The garnet framework compound, $\text{Li}_3\text{Nd}_2\text{W}_2\text{O}_{12}$, has been explored for Li-ion batteries and shows the possibility of reversible insertion and de-insertion of Li ions.

New polyanionic materials, especially phosphate-based compounds, are considered structurally and thermally resistant during charge/discharge cycling with fast diffusion of Li and Na ions [8, 9]. For instance, LiFePO_4 with olivine structures is the best example of the cathode material of choice for Li-ion battery applications in plug-in hybrid electric vehicles. This is because of its structural integrity and thermal and interface stability during fast diffusion of Li ions at high rate capability [9–11]. NASICON-type materials like $\text{A}_3\text{Fe}_2(\text{PO}_4)_3$ ($\text{A} = \text{Li}$ or Na), $\text{V}_2(\text{SO}_4)_3$ [12, 13], and the oxy polyanionic framework compounds such as Li_xMOXO_4 ($\text{M} = \text{V}$ and Ti ; $\text{X} = \text{S}, \text{P}$ and Si) and both α and β forms of $\text{NbO}(\text{PO}_4)$ have been widely explored as cathode materials recently for Li and Na-ion batteries [14–17]. Due to the availability of easily accessible sites for the intercalated ions to occupy and the presence of metal atoms that

ABSTRACT

Developing environmentally benign electrode materials with faster Li-ion kinetics is an essential requirement for high-performance Li-based energy storage devices. Here we report the large-scale synthesis of γ -MnOOH-graphene (γ -MnOOH-rGO) nanocomposite, through a simple hydrothermal route, for their application as potential anode material in Li-ion batteries. As-synthesized nanocomposite with the γ -MnOOH nanorods uniformly anchored on the graphene sheets exhibits enhanced electrochemical performance and achieves a very high specific capacity of ~ 435 mAh g⁻¹ at a current density of 1.0 A g⁻¹. Detailed electrochemical studies reveal faster Li-ion kinetics in γ -MnOOH-rGO nanocomposite electrode, dominated by non-diffusion controlled processes ($\sim 80\%$ at 1.0 mV s⁻¹). Further, the full-cell Li-ion capacitor fabricated with γ -MnOOH-rGO nanocomposite as the anode and activated carbon as the cathode exhibits a maximum energy density of ~ 51 Wh kg⁻¹ and a maximum power density of ~ 6.3 kW kg⁻¹, with excellent capacity retention of more than $\sim 87\%$ upon 8500 cycles. The present work thus demonstrates γ -MnOOH-graphene nanocomposite as promising anode material for advanced Li-ion batteries and high power Li-ion capacitors.

1. Introduction

Electrochemical energy storage systems such as batteries and supercapacitors are considered as most promising technologies that provide sustainable solutions to address the rising energy demands and environmental concerns [1]. Lithium-ion batteries (LIBs), prevalent in the electronic markets for the last three decades, continue to be the dominant power source for a wide range of applications, from portable electronic devices to large-scale hybrid electric vehicles and grid storage [2]. However, many research activities are focused on exploring alternative materials to replace the conventional graphite anode that is fundamentally limited by low specific capacity (~ 372 mAh g⁻¹), poor rate capability, and safety concerns [3,4]. In search of various anode materials for LIBs, manganese-based transition metal oxides attain much importance due to their low cost, high abundance, enhanced activity, multiple oxidation states, various possible crystal structures, and the environmentally benign nature [5–8]. Among the different

manganese-based transition metal oxides, the tunnel structured γ -MnOOH shows promising potential as anode material for lithium-ion batteries owing to its high theoretical capacity of 914 mAh g⁻¹ (three times greater than graphite) and better electronic conductivity $\sim 10^{-4}$ - 10^{-5} S cm⁻¹ in comparison with MnO_x ($\sim 10^{-8}$ to 10^{-6} S cm⁻¹) [9,10]. However, like other manganese oxides, γ -MnOOH experience capacity fading upon cycling arising from severe volume changes resulting in low initial Coulombic efficiency and poor cycling stability [11–14]. Engineering of materials in the nano regime helps overcome these issues through the improved active surface area and reduced ion diffusion length, thus resulting in enhanced electrochemical performances. Hybridizing the materials with carbon matrices (such as graphene, carbon nanotubes, carbon nanofiber) further improves the electronic and ionic conductivities, thus suppressing the volume changes, resulting in long-term stability as well as high rate capability of the hybrid electrode [15–18].

Herein we employ γ -MnOOH-rGO nanocomposite, synthesized by a

TO WHOMSOEVER IT MAY CONCERN

This is to certify that **Miss Adithya S.**, Post Graduate Student of Department of Economics, Christ College(Autonomous) Irinjalakuda , has successfully completed one month online Internship (18th December 2021 to 10th January 2022), with KILA. During the Internship period she actively participated in the on-going activities of KILA. She has conducted a mini research on “**Palliative care initiatives of Irinjalakuda Municipality**”.

Her positive attitude and multi-skills were very useful to KILA during her internship period.

Dr. Peter M Raj

Associate Professor, KILA

Date: 07.03.2022

Date: 27/05/2022

To whomsoever it may concern

This is to certify that Avany Sabu, student of Christ College, Department of Economics has completed her Research and Feasibility Internship from 11th May 2022 to 27th May 2022. She has carried on activities like research study, conducted survey & feasibility study in Thrissur district, face to face fund raising related to social cause and other activities pertaining to the objectives of the organization.

During her internship with us, she was found punctual, hardworking and inquisitive. We wish all success for her future endeavors.

Yours Sincerely,

Linsy Lonappan

April 2022

ACKNOWLEDGEMENT

This study has been made possible due to the cooperation assistance and conservative suggestions of many to whom I would like to express my sincere gratitude and thanks. First of all, I thank Lord Almighty for his abundant blessings bestowed us for the successful completion of Internship training.

I gratefully acknowledge my sincere gratitude to **LCC SYNTAX SOFT-TECH Pvt. Ltd.** for giving me platform to participate in the workshop and to undertake internship in this esteemed organization.

I take this opportunity to express our thanks to our beloved Principal in-charge Rev. Dr. Jolly Andrews CMI, Christ College (Autonomous), Irinjalakuda and our lectures Mrs. Jeena George, Mrs. Reeja Eugene and Mr. Ranjish PU who gave me the opportunity to do this training.

I also like to express our deep sense of gratitude to Mr. Ramaswamy T S , founder and CEO of LCC SYNTAX, India for granting us permission to undergo the internship programme in the organization.

I am so privileged under the guidance of Vishnu B Kumar, Prasobh Rajan sir to correct and improve my industrial qualities as well as learning skills in machine learning. The experience was quite different from what I learned from college, extending them to a daily life solution. Sure, it will be an asset to me.

Last but not the least, I would like to thank my friends and parents who helped us a lot in gathering different information, collecting data and guiding us from time to time in making this project. Despite of their busy schedule, they gave me different ideas in making this project unique.

April 2022

ABOUT THE COMPANY

Founded in Cochin back in the year 1992, LCC started its journey as a premier computer coaching centre and later advanced into one of the most reputed brand for computer learning throughout India. LCC has surpassed victory in finding and refining those hidden talents in our pupils, to deliver thousands of IT professionals to the evergreen IT Industry every year. Whether you are a novice, a mediocre or a professional in computer technologies, we have the right course for you to advance and follow an ambitious career path.

Technology as you can imagine, advances every second. It feeds upon itself i.e., technology makes more technology possible. LCC's expert academicians and certified faculties interact with our leading computer technology company allies like (include LCCs alliances here for eg. Java, Red Hat, Microsoft and Oracle) to come up with relevant certification courses (short term, long term, professional, and career courses) after thorough market research and study. LCC is also the training partner to World famous MNC TOTAL SOLUTIONS INC, CHICAGO, USA, and its allied Company EZMRX Bangalore. Our curriculum features the largest offering of computer course varieties to keep you updated with cutting edge technology through expert and experienced training faculties. This will help the students pursue a job of their dreams with better career prospects and industry best salaries.

CONCLUSION

Industrial Training helps students to develop their skills in the application of theory to practical knowledge. It also helps to develop the skills and techniques which are directly relevant to their desired goals. The project with which engaged had resolved the industrial application of Machine Learning. Great skills have been achieved during the development of this project, time management being one of them, research in various areas of Python and Machine learning and at the end of the day it can be said that the task has been a great success incorporated with extraordinary challenges. All in all, the sleepless nights, stressful days and hard work have paid off and besides some good moments were also experienced. These experiences will be used for ever.
