

## World Ozone Day

16<sup>nd</sup> September 2022

NATIONAL SERVICE SCHEME (UNITS 20&49)

National Service Scheme Units 20&49 of Christ College (Autonomous) Irinjalakuda Conducted an Orientation class as part of World Ozone Day. The class was taken by Christ college Geology department head Dr. Linto Alappat. The session was organized under the leadership of programme officers Prof. Shinto VP, Prof. Jincy SR, Prof Jomesh Jose, Prof. Lismerin and Prof Hazmina Fathima.

A number of commonly used chemicals have been found to be extremely damaging to the ozone layer. Halocarbons are chemicals in which one or more carbon atoms are linked to one or more halogen atoms (fluorine, chlorine, bromine or iodine). Halocarbons containing bromine usually have much higher ozone-depleting potential (ODP) than those containing chlorine. The man-made chemicals that have provided most of the chlorine and bromine for ozone depletion are methyl bromide, methyl chloroform, carbon tetrachloride and families of chemicals known as halons, chlorofluorocarbons (CFCs) and hydrochlorofluorocarbons (HCFCs).
