AQUAPONIC UNIT:

It is used for fish cultivation.

It is a sustainable system that combines aquaculture (fish farming) and hydroponics (soilless plant cultivation). In this closed-loop system, fish waste provides nutrients for plants, and the plants help filter and purify the water for the fish. It's an efficient way to grow both fish and plants in a symbiotic environment. It has been set up in 2022 and is still running smoothly.
