## Report of Ethical Hacking

## **Objectives**

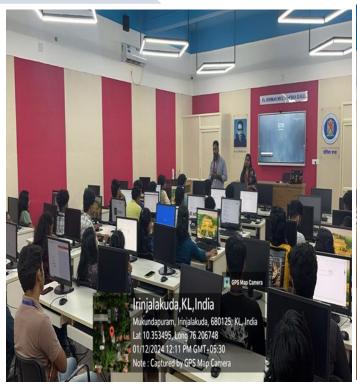

- Identifying Vulnerabilities
- Risk Assessment
- Improving Security
- Protecting Sensitive Data
- Educating Stakeholders

## Report of Ethical Hacking Session

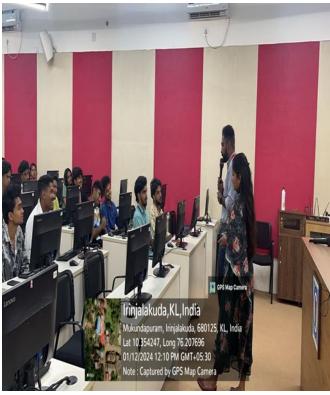

Department of Computer Science organized a session about the recent technology "Ethical Hacking" for the Final year students of B.Sc Computer Science and BCA on 12/01/2024 from 9.30 am to 12.00 pm at Russa Lab of Christ College (Autonomous), Irinjalakuda. The programme is is coordinated by Ms Rasmi P M and Mr Thoufeeq Ansari jointly, Assistant professors of department of Computer Sciencee jointly with the Red Hat Accadamy, East Thrissur. Ethical hacking, also known as penetration testing or white-hat hacking, is the practice of deliberately and legally exploiting vulnerabilities in computer systems, networks, applications, and infrastructure to identify security weaknesses. Unlike malicious hackers (black-hat hackers) who

exploit vulnerabilities for personal gain or malicious intent, ethical hackers use their skills to help organizations improve their cybersecurity defenses. Ethical hacking is a vital component of a comprehensive cybersecurity strategy, enabling organizations to proactively identify and address security vulnerabilities, protect sensitive data, and mitigate cyber risks effectively.

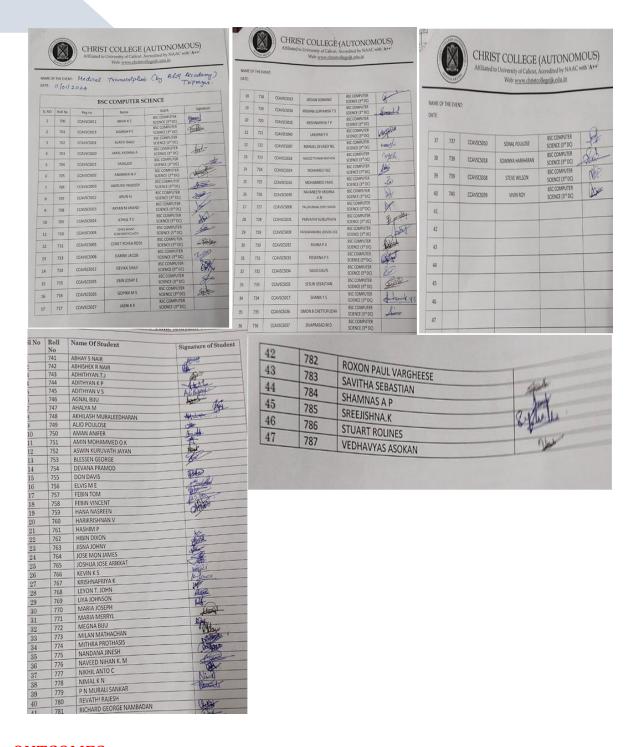

## **OUTCOMES**

- 1. Improved Incident Response Preparedness
- 2. Remediation Recommendations
- 3. Enhanced Security Defenses
- 4. Strengthened Security Controls
