# **COMPREHENSIVE RESULT ANALYSIS REPORT (2021 ADMISSION)**

IQAC Result Analysis Team of Christ College (Autonomous Irinjalakuda conducted result analysis of Fifth semester (2021 admission) students. Each student internal and external marks are considered for the purpose of result analysis. This report provides a clear picture of a student's course wise analysis. It also suggests the area in which the result will be improved. CRA also shows the relative progress of each and every student in the class. Highest marks scored, no of students passed or failed, average marks in each subject etc. The result analysis of 2021 admission shows majority of the students passed in all subjects.

# CRAR (Comprehensive Result Analysis & Review)

## Introduction

**Results Analysis** helps to understand how students are learning, and how they **have** performed in each area of the programme. Result analysis report can be used to identify areas of strength and weakness of a student. It also reveals the quality of teaching and the areas to be focused. The detailed analysis of examination results was started from 2017 onwards.

Immediately after the publication of end semester results, the data analysis team downloads the result in excel format. Analysis is done using the excel templates. Reports are prepared and send to HoD/ Programme Coordinator for review and corrective actions. The reports are also presented in the IQAC meeting.

### ***Comprehensive result analysis:***

Detailed analysis of exam results is needed for effective corrective actions. A poor exam result may be due to several issues like a) Inadequate question paper b) Poor teacher performance c) Poor student performance to name a few. Digging the data and proper interpretation is essential to list out the reasons. The CRAR is a project initiated by IQAC to understand the real reason behind the exam results.

Reports generated from CRAR project report will enable the Head of the Department/Programme Coordinator to make additional efforts to upgrade the results.

## Objectives

- Identify / select courses in which students are showing weak performance

- Set benchmarks for each year for continuous growth
- Corrective measures for each paper
- Identify weakness of each student and take corrective measures
- Alert students about their performance and inform parents

## Methodology

All the calculations were done in Microsoft excel sheets. The master calculation sheet is shared to data analysis team who performs the calculations downloaded from ERP software.

Our result analysis consists of three parts

- Results of Class (Programme)
- Results of a course (paper)
- Results of Individual student

### Part A: Results of Class

This section of the report highlights the performance of any batch. Percentage of pass, grades give a rough idea about the performance of the batch

### RESULT ANALYSIS

2019 PASSED OUT STUDENTS (2016 ADMISSION YEAR) CHRIST COLLEGE (AUTONOMOUS), IRINJALAKUDA

GRADE DISTRIBUTION OF EACH PROGRAM

7 | Page

IQAC/CHRIST COLLEGE (AUTONOMOUS)/RESULT ANALYSIS -UG 2016 ADMISSION

1. Grade and Pass Percentage of each program.

#### Part B: Results of a Course (Paper)

Following key factors are measured from results of each paper

- Pass Percentage
- Grade Distribution- No of students who gained different grades in each A+, A, B+,B etc.
- Mean, Median, Skewness, Std deviation of each course (paper)

The detailed analysis gives an idea of the course which is an outlier.

#### 1. B.A. Economics

##### Part 1: Individual Student Result

Pass percentage: 83.05%

Fig. 2. Comprehensive analysis of a paper

The courses are selected statistically using the following criteria of Fail%, Skewness, Average marks, Std dev and Max. marks (of top performing student)

#### Targets

- Average marks greater than 70 with a negative skew
- Maximum marks above 85
- Standard deviation less than 18
- Pass percentage- above 80

#### Selection criteria

Papers were identified and selected to x, y, z categories based on the following table.

Selection criteria of courses					
Category	Fail %	skewness	Avg marks (%)	Std dev	Max marks (%)
z	>10	> + 0.5	<55	>18	<80
y	>10	> + 0.5	<55	>18	
x	>10	> + 0.5			

Fig 3. Selection criteria of courses

Remedial measures are suggested for statistically selected papers

Category	Actions
<b>z</b>	syllabus modifications
	additional crash course towards the beginning of exam
	make compulsory - answering of previous question papers
	special coaching to weak learners
<b>y</b>	make compulsory - answering of previous question papers
	special coaching to weak learners
<b>x</b>	special coaching to weak learners

Fig. 4 remedial measures for each paper

### Part C: Results of Individual Student

Result of each student is analysed based on z-score and relative progress.

**z-SCORE analysis:**

The z-score of each student was calculated in all examinations to review the progress of student in each subject. This enables the mentor to identify the weakness of mentee and suggest corrective actions. HODs / Programme Coordinators can arrange remedial classes based on the z score. Class teachers can arrange Detailed analysis of exam results which gives the performance of the class in each subject.

	2	11	2	11	7
	-11	-9	-12	-8	0

Relative progress:

The relative progress is measured comparing the semester rank with the plus two rank of the student.

This gives an idea on the relative progress of student with respect to his incoming quality.

## Sample Reports

Sample reports are available in college e-repository

## Outcomes

- The results were discussed with parents during the open house.
- Students who were showing a downward trend in academics were alerted.
- The results were discussed in the department meetings which resulted in corrective measures.
- Parents appreciated the result analysis in the PTA meeting as they are aware about students' progress in every year.

- Management offered fee concession and Pragathi Samman awards to students who show positive progression.
- The pass percentage of outgoing students are progressing.

## Glossary

### Average (Mean)

The **Arithmetic Mean** is the average of the numbers: a calculated "central" value of a set of numbers.

To calculate it:

- add up all the numbers,
- then divide by how many numbers there are.

### Median

The median is the middle number in a sorted, ascending or descending, list of numbers and can be more descriptive of that data set than the average.

The median is sometimes used as opposed to the mean when there are outliers in the sequence that might skew the average of the values.

### Skewness

Skewness refers to distortion or asymmetry in a symmetrical bell curve, or normal distribution, in a set of data. If the curve is shifted to the left or to the right, it is said to be skewed.

Skewness can be quantified as a representation of the extent to which a given distribution varies from a normal distribution.

### Positive skewness

Mean (average) marks greater than median- a greater number of students are having less marks.

Positive skew values are not good

Negative skewness

Mean (average) marks less than median- a greater number of students are having high marks

Negative skew values are good

The value of the z-score tells you how many standard deviations you are away from the mean. If a z-score is equal to 0, it is on the mean. A positive z-score indicates the raw score is higher than the mean average. For example, if a z-score is equal to +1, it is 1 standard deviation above the mean.

$$Z = \frac{x - \mu}{\sigma}$$

Score (x), Mean (μ), and SD (σ) are labeled with red arrows pointing to their respective parts in the formula.

In the present report the calculated z score is multiplied by 10 for aesthetic purpose.

Students who show positive and negative z scores re highlighted for easy identification.
