

As the pandemic situation was not over and the movements were restricted our activities were switched to online mode. We have utilised the possibilities of online mode at its maximum to interact with the coordinators and students and to encourage them. To make the students active and challenging was a great task for the club during the pandemic as students were already fed up with the online programmes. So we have decided to come out from the conventional activities and programmes to make everyone enjoy and active.

Sadako Crane Challenge-

In connection with Hiroshima- Nagasaki Day observance we have organised a different programme, making as much as paper cranes. The challenge was accepted by many students and was a success.
